Cutting Grinding Milling Filing Brushing Polishing Deburring Finishing

Welcome to PFERD Australia's 2020 product guide. Featuring a range of over 3,800 products that offer quality solutions for surface finishing and the cutting of materials. Products suit tradespeople, automotive, construction, manufacturing and much more.

PFERD Australia is one of Australia's leading manufacturers and suppliers of abrasives. Servicing Australia for over 35 years. A German family owned company with an amazing history spanning over 200 years is the principal brand for the development, production, support and distribution of abrasive products.

We are recognized for our depth of range, trusted for our quality products and sought after for our service and technical know-how. Operating with sustainability in mind and responsible use of all resources make PFERD a dependable and reliable trading partner.

Our global product range includes more than 8,500 products for differing applications, with over 95% of the range manufactured by PFERD production plants around the world. A brand that sets a benchmark for product quality and performance, with applications from cutting, grinding, brushing, milling, filing, polishing, cleaning to deburring, rust removal etc.

As Australia's most trusted abrasives supplier, we recognize the importance of providing quality abrasives to our users. PFERD products are OSA (Organisation for the Safety of Abrasives) approved and comply with Australian standards, offering you the greatest level of safety and peace of mind.

Workers around the world trust in the blue and choose PFERD. The combination of individual consultation, innovative high-performance products, and on-site experience, have made PFERD into a recognized brand for quality abrasives. Our team of technical experts is here to help. Staff is dedicated to providing a great product, personal contact, valuable solutions and building long-term relationships.

PFERDERGONOMICS and PFERDEFFICIENCY - A focus on people

The manufacturing process of our products from research and development to production is focused on the end user. PFERD feels there is a duty of care to provide products that offer increased safety.

The PFERDERGONOMICS programme aims at the long-term reduction of dust, noise and vibration levels produced by abrasive products. To increase the user's comfort and not impair their health, even under tough working conditions.

PFERDEFFICIENCY offers innovative high-performance product solutions with outstanding added value. This achieves great results in the shortest time and saves on energy and reduces costly waste, improves end user productivity and cost savings.

Safety is crucial when working with abrasive products and PFERD is your partner for safe tools that meet all the requirements of national and international laws, standards, codes, and guidelines. The PFERD quality management system is ISO9001 certified and guarantees compliance with all regulations.

Thank you for choosing PFERD.

Shawn Sumner
Managing Director

PFERDVALUE

SERIOUS Performance

A background image of an industrial setting. In the foreground, a robotic arm with a blue and black body is grinding a metal part, creating a large, bright spray of orange sparks that extends across the lower half of the frame. In the background, two people in blue work uniforms are seated at a table. The man on the left is using a laptop, and the woman on the right is writing in a notebook. Various pieces of equipment, including a microphone on a stand and a power supply unit, are on the table. The background shows a large industrial facility with pipes and structural elements.

PFERDERGONOMICS

Vibration Filter

Users of hand-held tools are exposed to a significant degree of mechanical oscillation. The effects of these oscillations may include decreased performance and adverse health effects.

PFERD tools and tool drives with the 'VibrationFilter' pictogram cause substantially fewer vibrations than comparable products.

Noise Filter

Noise at the workplace can become an issue. Depending on the job and personal perceptions, noise at work may be bothersome, disruptive and may even pose a danger to health.

The 'NoiseFilter' pictogram identifies PFERD tools and tool drives that have been optimized in terms of their noise emissions, and which pose a reduced risk of damage to users' hearing.

Emission Filter

The air quality in work areas is adversely affected by dust. Not only does the pollutant content constitute a health hazard, but the size of the particles may also create issues. The smaller they are, the greater the health hazard.

PFERD tools which create less dust than other products when used are marked with the 'EmissionFilter' pictogram.

PFERD's oil-free air grinders cause lower emissions, and also carry the 'EmissionFilter' pictogram.

Haptic Filter

The word 'haptics' is generally associated with touch and mechanical stimuli. PFERD takes this definition a step further. When using tools, it is important that the work is carried out with the lowest levels of force and effort, with a high amount of control, and with as much comfort as possible.

PFERD tools and tool drives with the 'HapticFilter' allow for labour-saving, ergonomic work with minimal effort.

Do Not Use If Damaged

VICTOGRAIN products are some of the most effective grinding tools in the world.

PFERD's triangular, precision-formed abrasive grain achieves uniquely high abrasive performance.

The VICTOGRAIN abrasive grain triangles are identical in shape and size and their cutting edges are applied to the workpiece at the optimum angle, meaning the grain needs very little energy to penetrate the workpiece. As such, the user benefits from an efficient machining process with

- fast working,
- a long tool life,
- less heat build-up in the workpiece, and
- a lower power output required for the tool drive.

The VICTOGRAIN abrasive grain triangles are fixed to the substrate on one of their sides.

This means they are securely fixed in place and, together with their slim design, offer an extremely large chip space in order to further improve machining efficiency.

The structure of the triangular VICTOGRAIN has also been specially adapted to maximize results. The very small crystals inside the triangles ensure optimal wear characteristics as sharp cutting edges are always exposed, but only the minimum amount of abrasive grain/the triangle breaks off.

By combining all these properties together, users benefit from optimal, constant performance during cool grinding and an extremely long tool life together with consistent workpiece surface roughness.

The **VICTOGRAIN** abrasive grain is optimally aligned

The jumping HORSE

PFERD (the German term for horse) is leading in the **development, production and support**, as well as in the **distribution**, of tool solutions for **work on surfaces and material cutting**. In keeping with a tradition that dates back more than 200 years, PFERD operates as an independent, internationally oriented, **family-owned company** geared towards the long term.

PFERD tools offer the user **maximum benefit and optimum cost-effectiveness**. Its unlimited commitment to **premium quality**, its **reliability** as a supplier and its **responsible use of resources** all make PFERD a dependable and reliable **trading partner that operates with sustainability in mind**.

Greater economic efficiency

Each and every day, PFERD tools solve **application problems within a great number of industries**. Innovations in this area regularly offer **considerable added value**: not just for users, but for trade as well – PFERD innovations are **unique selling propositions**!

PFERD product management is constantly **updating** and further developing the range in line with **your wishes and needs**. If required, PFERD can develop your **own tailor-made solution**, always with the aim of attaining the highest levels of cost-effectiveness for you.

The optimum tool

With over 8,500 tools for **work on surfaces and material cutting**, PFERD offers the **ideal tool solution** for every application. The selection of the correct tool is determined by the **application**, the **material** to be worked and the appropriate **tool drive**.

The **tool navigation** in the introduction of the respective catalogue sections 1 to 9 will help you **select the optimum tool**.

Quality since
1799

PFERD Australia Pty. Ltd.

Active in Australia for over 30 years, PFERD has gained a reputation as a leading manufacturer of abrasive solutions. With more than 7,500 products, product training, technical support, national warehousing and Australia-wide service, we can offer the complete solution for your needs.

Professional Training & Advice

PFERD offers professional and practice-related training courses that are the foundation for mutual success. We explain how to use PFERD products to **maximise production** whilst **minimising costs**. We advise on the correct selection and use of products to **maximise safety** while **minimising product costs and down-time**. On site training is also available.

Better PFERD

Quality is directly connected with **benefit** and **customer satisfaction**. That's why PFERD researches and develops **innovative, high-performance products**.

Our own **machine and plant construction**, and the continuous testing and further development of the **quality and safety standards** in our own laboratories all guarantee the proverbial **PFERD quality**. As a founder member of the "**Organisation for the Safety of Abrasives (oSa)**", PFERD also offers the **highest possible levels of safety** for the user by constantly monitoring manufacturing in all PFERD production facilities worldwide.

PFERD **quality management** is **certified** according to ISO 9001.

Always at your side

PFERD employees are here to help you. We are dedicated to advising you professionally and completing your order reliably. We place great emphasis on personal contact with you and building long-term business relationships.

PFERD - Product Guide

1 - Files

For 200 years, PFERD files have been renowned worldwide as a top quality product. With their consistently high cutting performance, ensuring an excellent surface quality even after long use, they reduce the cost of labour-intensive manual work. PFERD has developed a number of ideal shapes and cuts for specific applications in industry and the crafts.

File types available

- Files for the workshop
- Precision files
- Wood files and rasps
- Chain Saw files
- Sharpening files
- Milled tooth files
- File handles, file sleeves, file brush

PFERD stamp

2 - Burrs & Hole Saws

Burrs - Tungsten Carbide

PFERD burrs are designed for machining materials of virtually any strength. Our burrs provide exceptional impact resistance, minimising tooth chipping & breaking. Available in a variety of shank diameters to suit your tool or application.

Need a high impact resistant burr for those tough applications? The Cut TOUGH and TOUGH-S range are very durable, minimising tooth breakages and chipping when used in tough applications such as steel fabrication, foundries and dockyards. Cut ALU developed for aluminium and coarse grinding work on non-ferrous metals. Cut INOX has been developed for those INOX stainless steel applications. Cut MICRO is designed for exceptional results at very high RPM speeds. Cut STEEL developed for all mild steel applications.

Hole Saws - HSS Bi-Metal

PFERD HSS 'high speed steel' Bi-Metal hole saws can be used for cutting steel, stainless steel, aluminium, cast iron, copper, wood, plastic and many other materials. The alternating tooth pitch prevents chattering during use. Select from a wide range of sizes or popular sets. Hole saw arbors and accessories are available separately.

Individual Hole Saws

Available in sizes 16mm to 152mm.

Hole Saw Kits

Available in 9 and 13pc kits. The sets are neatly arranged in a protective plastic box.

Quick Change Hole Saw Mounting System

Includes quick change unit with special adaptors to suit the hole saw of your choice

3 - Mounted Points & Bench Grinding Wheels

PFERD offers a very extensive line of vitrified and resinoid-bonded mounted points. Designed to meet individual application needs, these products come in a broad range of grain types, grit sizes, hardness levels and shapes. The mounted points are manufactured on advanced production lines to high standards of dimensional accuracy and stability, consistent quality, and close tolerances.

Available Shank sizes

- 6mm Shank
- 3mm Shank
- 1/4" Shank

4 - Fine Grinding & Polishing Tools

Achieve the perfect end result with every job. PFERD's Fine Grinding & Polishing Tools range suits stainless steel, aluminium, plastic and many other materials. We can help you to find the right fine grinding and polishing tool to suit the application. For more information on the complete range items contact PFERD.

5 - Diamond & CBN Tools

PFERD Australia offers a range of diamond and CBN products that includes specialty files and diamond grinding points. In addition to this range PFERD also specialises in the customer specific manufacture of electroplated, resinoid, ceramic and metal bonded diamond and CBN tools.

Advantages of using diamond include: superior product life and dimensional stability as well as avoiding thermal damage to the workpiece due to low grinding temperatures.

Diamond Product Range

- Cut-off wheels
- Cup wheels
- Drills
- File Sets
- Handy files
- Needle files
- Grinding Points

6 - Grinding & Cut-Off Wheels

PFERD offers an outstanding range of quality cutting and grinding products. Years of experience working with different industry applications has led to the development of new items that suit today's requirements. Unique products like the POLIFAN Curve, the POLIFAN Strong, DUODISC and the COMBICLICK range, have changed working with metal as you know it. Note, discs are also colour coded to suit different materials.

Grinding Wheels

A range of sizes and types to grind steel, cast iron, stainless steel (INOX) and aluminium.

Cut-Off Wheels

A range of sizes, types & thicknesses from 0.8mm to cut steel, stainless steel (INOX), aluminium and stone.

Polifan (Flap Discs)

A wide range of grinding flap discs suit steel, stainless steel (INOX), aluminium and more. Try the POLIFAN Strong for high stock removal & POLIFAN Curve for fillet weld applications.

DUODISC

An amazing 2 in 1 grinding disc that can be used for cutting as well. Sizes 4", 4 1/2" & 5", 6" & 7". In 1.9, 2.8 & 3.5mm thickness.

7 - Large Diameter & Cut-Off Wheels

PFERD large diameter cut-off wheels are available for use on a wide variety of cutting machines to suit all steels, cast iron, non-ferrous metal alloys and special alloys. PFERD large diameter cut-off wheels provide easy cutting of steel that cannot be sawn or flame cut. The cutting quality is consistent over the entire cut-off wheel lifetime until it is completely used, due to the continuous self-sharpening process. A more cost effective option than any other cutting procedure.

Large Diameter Cut-Off Wheels Range

- Low speed general purpose and premium wheels - 80mtr/sec to suit 240v chop saws (steel & INOX)
- High speed large diameter cut-off wheels - 100mtr/sec to suit 3 phase saws
- High speed portable cut-off wheels to suit portable engine driven saws (steel, stone & rail)

8 - Industrial Power Brushes

PFERD industrial power brushes are quality products used for surface machining. We offer a comprehensive range of high quality brushes in both INOX or mild steel to suit professional brushing of various materials and applications.

Shaft Mounted & Specialty Brushes

KBG Flared Cup Brushes

Cup Brushes

Wheel Brush To Suit M14 Thread

Bench Grinder Wire Brushes With Arbor Hole

RBG Wheel Brush

Pipeliners Brushes

POS Range

Hand Scratch Brushes

9 - Tool Drives

The PFERD product range also includes both air and electric powered tools for hand held applications such as grinding, milling, brushing, cutting and polishing. One of the most important factors that helps you to achieve cost effective working methods is selecting the correct tool. PFERD offers high quality units to suit most metal working applications.

Air Tool Range:

- Marking / Engraving Pen
- Straight Pencil Grinders
- Right Angle Die Grinders
- Straight Die Grinder
- Angle Grinder

Electric Tool Range:

- Straight Grinders
- Pipe Belt Grinder
- Drum Grinder
- Angle Grinder
- Multi-Speed Mammoth

Coated Abrasives

Paper & Cloth Backed Abrasive Products

PFERD offers a wide range of coated abrasives, covering made-to-order products that best suit your application or alternatively you can choose from a variety of standard stocked lines.

Find the most cost effective option with PFERD. Our abrasive specialists can help you to identify the most suitable abrasive product from our range of aluminum oxide, zirconia, ceramic and diamond materials. We also supply accessories including backing pads, belt restorers, slip cloth, sanding sponges and much more.

Files for the workshop

Cut 1		■ Cross cut. ■ Suitable for coarse stock removal and for roughing.
Cut 2		■ Cross cut. ■ Suitable for universal roughing and finishing.
Cut 3		■ Cross cut. ■ Suitable for fine processing and finishing.

Car body files

Cut 00		■ Radial cut. ■ Suitable for very coarse stock removal and for roughing. ■ Creates score-free surfaces.
Cut 0		■ Radial cut. ■ Suitable for coarse stock removal and for roughing. ■ Creates score-free surfaces.
Cut 1		■ Radial cut. ■ Suitable for coarse stock removal and for roughing. ■ Creates score-free surfaces.
Cut 2		■ Radial cut. ■ Suitable for universal roughing and finishing. ■ Creates score-free surfaces.
Cut 3		■ Radial cut. ■ Suitable for fine stock removal and finishing. ■ Creates score-free surfaces.

Milled tooth files

Cut 1		■ Straight cut. ■ Suitable for coarse stock removal on soft metals. ■ Because of its milled tooth shape with large flutes, the teeth do not clog up.
Cut 2		■ Straight cut. ■ Suitable for universal roughing and finishing on soft metals. ■ Because of its milled tooth shape with large flutes, the teeth do not clog up.
Cut 3		■ Straight cut. ■ Suitable for fine stock removal on soft metals. ■ Because of its milled tooth shape with large flutes, the teeth do not clog up.

Sharpening files

Classic		■ Classic spiral cut. ■ For users who prefer an aggressive filing action.
Premium		■ Innovative spiral cut. ■ For users who prefer a softer filing action.
Single cut Cut 2		■ Single cut. ■ Universally suited to sharpening.

Rasps

Cut 1		■ Rasp cut. ■ Suitable for coarse stock removal and for roughing.
Cut 2		■ Rasp cut. ■ Suitable for universal roughing and finishing.
Cut 3		■ Rasp cut. ■ Suitable for fine processing and finishing.

Precision files

Cut 00		■ Cross cut. ■ Suitable for very coarse precision work.
Cut 0		■ Cross cut. ■ Suitable for coarse precision work.
Cut 1		■ Cross cut. ■ Suitable for medium precision work.
Cut 2		■ Cross cut. ■ Suitable for medium to fine precision work.
Cut 3		■ Cross cut. ■ Suitable for fine precision work.
Cut 4		■ Cross cut. ■ Suitable for very fine precision work.

Several criteria determine PFERD quality

Uniform hardness through flawless steel microstructure

The profiling in the rolling mill, the forging of shape and tang, the annealing prior to cutting and the heat treatment each cause a change in the steel microstructure. The high carbon content of the steel microstructure determines the hardness and cutting performance of the file and must therefore be maintained.

Exact shape and uniform cut from tang to tip

The file blanks acquire their exact shape through forging and grinding. This enables accurate work. Equally spaced cuts and a uniform depth of cut ensure good filing performance and good surface finishes. The type and angle of the cut depend on the purpose for which the file is intended.

Perfectly milled tooth geometries for every application

Tooth shapes suited to various applications ensure the best stock removal rate. There is no universally appropriate tooth shape for every application. PFERD has developed the optimally suitable tooth shapes and tooth geometries for each of the various applications. The figure shows a car body file tooth with its typical rounded tooth face and large flute.

Number of cuts for cut files [cuts/cm] according to DIN 8349

Length (without tang) [mm]	Machinist's files number of cuts $\pm 8\%$			Sharpening files number of cuts $\pm 5\%$					
	Cut 1-B Bastard	Cut 2 Half-smooth	Cut 3-S Smooth	Regular	Slim	Extra slim	Double extra slim	Mill saw files	
								Cut 1	Cut 2
100	17	22	28	20	23	26	–	–	–
125	–	–	–	19	22	24	25	–	–
150	13	18	22	17	20	22	24	20	24
175	–	–	–	16	19	21	23	–	–
200	10	14	18	15	17	20	22	18	20
250	9	12	16	14	16	17	–	16	18
300	8	11	14	–	–	–	–	14	16
350	7	10	13	–	–	–	–	12	14

Determining the number of cuts:

The numbers of cuts for PFERD files conform to DIN 8349 requirements.

The number of cuts for a file is the number of scores (cuts) per cm of file length, counted along the file axis. For cross cut files, the number of cuts is determined by the upper cut.

Dimensions:

The cross-sectional dimensions indicated in the tables are measured across the cut and may vary depending on cut type. For tapered files the cut is measured at the highest and widest position.

PFERD files are manufactured in compliance with DIN and ISO standards.

PFERDVIDEO

General information

PFERD tools are manufactured in compliance with the highest quality standards. The broad product range offers the best tool solution for every application. Outstanding quality, long tool life and excellent stock removal performance allow economical work with diverse materials, delivering excellent results. PFERD quality is certified according to ISO 9001.

PFERDVIDEO

You will receive more information here or at www.pferd.com.au

If you have any questions about the optimization of your burr applications, our sales representatives and technical advisors will be happy to help or visit you. PFERD works alongside you to provide application engineering solutions for working with diverse materials.
Visit us: www.pferd.com.au
Or call 1300 0 PFERD

If you cannot find the solution for your particular application in our product range, we produce burrs of premium PFERD quality on request, tailor-made to meet the requirements of your job. Please contact your PFERD sales representative.

Cuts for universal applications

MX-NCC

- Economic choice
- Very good stock removal
- Range of standard shapes & sizes

Cut NON-FERROUS

- High stock removal performance on non-ferrous metals, brass, copper, plastics and fibre-reinforced plastics
- Universally usable

Cut 3 PLUS (MX according to DIN 8033)

- Cross cut
- Machining of cast iron, steel < 60 HRC, stainless steel (INOX), nickel-based alloys and titanium alloys
- High stock removal

Cut CAST

- Extremely high stock removal performance on cast iron
- Smooth milling
- Reduced vibration and less noise

Cut 5 (F according to DIN 8033)

- Fine machining of cast iron, steel < 60 HRC, stainless steel (INOX) and high-temperature-resistant materials such as nickel-based and cobalt-based alloys
- Good surface

Cut EDGE

- Creates exact edge shapes – with either 30°- or 45°-chamfering or a defined radius of 3.0 mm
- Safe and comfortable to guide

Cuts for high-performance applications

Cut STEEL

- Extremely high stock removal performance on steel and cast steel
- Smooth milling
- Reduced vibration and less noise

Cut TOUGH

- High stock removal performance on cast iron, steel < 55 HRC
- High stock removal
- Extreme impact resistance
- Also suitable for use with high surface contact angles > 1/3 and under impact loads

Cut INOX

- Extremely high stock removal performance on all austenitic, rust- and acid-resistant steels, stainless steel (INOX)
- Substantially reduced vibration and less noise

Cut MICRO

- Good stock removal on almost all materials < 68 HRC
- High surface quality
- Reduced vibration and less noise

Cut ALU

- High stock removal performance on aluminium and aluminium alloys, light metals, non-ferrous metals and plastics
- Smooth milling

Cut TITANIUM

- Specially developed for machining hard titanium materials (tensile strength > 500N/mm²)
- Extremely high stock removal
- Low vibration and noise

Tungsten Carbide Burrs

Burr shapes and applications

TC burrs for universal applications are suitable for fine and coarse stock removal on the key materials used in industrial manufacturing. They provide a good stock removal rate and are not specific to a particular material.

Advantages:

- Good stock removal rate through optimum matching of tungsten carbide, geometry, cut and available coating.
- Long tool life.
- Reduced wear on the tool drive due to impact-free work without chatter marks, thanks to the high concentricity.
- High surface quality.

Matching tool drives:

- Flexible shaft drive
- Straight grinder
- Robot
- Machine tools

Materials that can be worked:

- Steel, cast steel
- Stainless steel (INOX)
- Non-ferrous metals
- Cast iron

Applications:

- Milling out
- Levelling
- Deburring
- Cutting out holes
- Surface work
- Work on weld seams

Recommendations for use:

- If possible, use the tools on powerful drives with elastically mounted spindles to avoid vibration.
- For the cost-effective use of burrs, work with higher rotational/cutting speeds. Power recommendation for tool drives:
-Shank diameter of 3 mm: 75 to 300 watts
-Shank diameter of 6 mm: from 300 watts
- Please observe the rotational speed recommendations.

Recommended rotational speed range [RPM]

To determine the recommended cutting speed range [m/min], please proceed as follows:

- ➊ Select the material group to be machined.
- ➋ Determine the type of application.
- ➌ Select the cut.
- ➍ Establish the cutting speed range.
- ➎ Select the required burr diameter.
- ➏ The cutting speed range and the burr diameter determine the recommended rotational speed range.

➊ Material group			➋ Application	➌ Cut	➍ Cutting speed
Steel, cast steel	Steels up to 1,200 N/mm ² (< 38 HRC)	Construction steels, carbon steels, tool steels, non-alloyed steels, casehardened steels, cast steel, alloyed steels	Coarse stock removal	1	600–900 m/min
				3 PLUS	450–600 m/min
			Fine stock removal	HICOAT HC-FEP	450–750 m/min
				5	450–600 m/min
	Hardened, heat-treated steels over 1,200 N/mm ² (> 38 HRC)	Tool steels, tempering steels, alloyed steels, cast steel	Coarse stock removal	3	250–350 m/min
				3 PLUS	
				4	
				HICOAT HC-FEP	250–450 m/min
Fine stock removal	5	350–450 m/min			
Stainless steel (INOX)	Rust and acid-resistant steels	Austenitic and ferritic stainless steels	Coarse stock removal	1	250–450 m/min
				3	250–350 m/min
				3 PLUS	
				4	250–450 m/min
			Fine stock removal	5	350–450 m/min
Non-ferrous metals	Soft non-ferrous metals	Aluminium alloys	Coarse stock removal	1	600–900 m/min
		Brass, copper, zinc	Coarse stock removal	1	600–900 m/min
			Fine stock removal	3	450–600 m/min
	Hard non-ferrous metals	Bronze, titanium/titanium alloys, hard aluminium alloys (high Si content)	Coarse stock removal	3	250–350 m/min
			4		
			Fine stock removal	5	350–450 m/min
	High-temperature-resistant materials	Nickel-based and cobalt-based alloys (engine and turbine construction)	Coarse stock removal	3 PLUS	250–450 m/min
			4		
			Fine stock removal	5	350–600 m/min
Cast iron	Grey cast iron, white cast iron	Cast iron with flake graphite EN-GJL (GG), with nodular graphite/nodular cast iron EN-GJS (GGG), white annealed cast iron EN-GJMW (GTW), black cast iron EN-GJMB (GTS)	Coarse stock removal	1	600–900 m/min
			3 PLUS	450–600 m/min	
		Fine stock removal	3	450–600 m/min	

Example:

TC burr,
3 PLUS cut,
burr dia. 12 mm.
Coarse stock removal on steels
up to 1,200 N/mm².
Cutting speed: 450–600 m/min
Rotational speed range:
12,000–16,000 RPM

Safety note:

Please observe the reduced rotational speeds for long-shank versions.

25	3,000	4,000	6,000	8,000	10,000	11,000

Recommendations for use:

An optimum rotational speed and power output for the tool drive (airpowered or electric grinders, flexible shaft drive) are required for cost-effective use of tungsten carbide burrs.

If possible, use the tools on powerful drives with elastically mounted spindles to avoid vibration.

For cost-effective use of burrs with a shank diameter > 6 mm, a tool drive output of 300–500 watts is required when used at a higher rotational speed and cutting speed.

Use the highest rotational speed possible within the recommended rotational speed and cutting speed ranges.

For applications with low stock removal (deburring, chamfering, minor work on surfaces), the rotational speed can be increased by up to 100 % (this excludes tungsten carbide burrs with long shanks).

Use only rigid clamping systems and drives as impacts on the tools and tool chatter lead to premature wear.

1/3 of the total surface

The burr surface in contact with the workpiece must not exceed 1/3 of the total burr surface. Failure to comply with this recommendation will result in rough milling behaviour and possibly in broken teeth. If this cannot be avoided, we recommend using the TOUGH and TOUGH-S cuts.

In direction of rotation = fine finish

In general, burrs are used counterrotationally or with a swinging motion. To achieve fine finishes, pass the tool rapidly over the workpiece in the direction of rotation.

Safety notes:

= Wear eye protection!

= Wear hearing protection!

Observe the recommended rotational speed, especially when using burrs with long shanks!

Wearing protective gloves is recommended. Handle the tool drive with both hands.

Avoiding misuse

Figure	Consequences of misuse	Solution
	The burr becomes clogged during use.	Use the correct cut for the material being machined. Use tools with a HICOAT coating or use grinding oil.
	Pronounced discolouration can be seen in the transition between the toothed section and the shank.*	Observe the recommended rotational speeds and/or reduce the contact pressure and surface contact angle.
	The toothed section detaches from the shank.	
	There are flying sparks.	Reduce the rotational speed and contact pressure and make sure that the surface contact angle is no more than 1/3 of the burr surface.
	Parts break off from the toothed section.	Avoid impact loads when using the tool.

Figure	Consequences of misuse	Solution
	The shank breaks.	Only use rigid drives and undamaged clamping systems, and replace them if necessary.
 	The clamping length is incorrect.	Do not choose a burr clamping depth that is too small. In general , the minimum clamping depth is 2/3 of the shank length (does not apply to burrs with long shanks).
	The shank bends on burrs with a long shank.	Observe the recommended rotational speeds and safety notes for burrs with a long shank.
 	Signs of wear such as rough running and strong vibrations occur, as well as increased flying sparks.	Do not use burrs beyond the end of their service life. Use a new burr instead.

* On TC burrs designed for high-performance applications, blue discolouration is extremely difficult to avoid on account of the very high stock removal rate. However, this does not constitute a safety risk.

Cuts for universal applications

MX-NCC

- Economic choice
- Very good stock removal
- Range of standard shapes & sizes

Cut 3 PLUS (MX according to DIN 8033)

- Cross cut
- Machining of cast iron, steel < 60 HRC, stainless steel (INOX), nickel-based alloys and titanium alloys
- High stock removal

Cuts for high-performance applications

Cut STEEL

- Extremely high stock removal performance on steel and cast steel
- Smooth milling
- Reduced vibration and less noise

Cut ALU

- High stock removal performance on aluminium and aluminium alloys, light metals, non-ferrous metals and plastics
- Smooth milling

Cut INOX

- Extremely high stock removal performance on all austenitic, rust- and acid-resistant steels, stainless steel (INOX)
- Substantially reduced vibration and less noise

Cut TOUGH

- High stock removal performance on cast iron, steel < 55 HRC
- High stock removal
- Extreme impact resistance
- Suitable for use with high surface contact angles > 1/3 and under impact loads

Contents:	SA-3, SA-5, SC-3, SC-5, SD-5, SE-5, SF-5, SG-3, SG-5, SL-4						
Carbide Burr Set - 1/4" - Cut STEEL Exclusive steel cut gives longer and faster cut.							
Assorted	5 Piece Set		26000013	4007220958681	1	\$457.03	
Contents:	1 piece each of ZYA 12.7x25.4x6.35 STEEL, WRC 12.7x25.4x6.35 STEEL, SPG 12.7x25.4x6.35 STEEL, RBF 12.7x25.4x6.35 STEEL, KEL 13.1x32.3x6.35 STEEL						
Carbide Burr Set - 1/4" - Cut INOX Stainless Steel Exclusive INOX cut gives longer and faster cut.							
Assorted	8 Piece Set		75604535	4007220945902	1	\$822.59	
Contents:	1 piece each of ZYA 9.5x19x6.35 INOX, ZYA 12.7x25.4x6.35 INOX, WRC 9.5x19x6.35 INOX, WRC 12.7x25.4x6.35 INOX, RBF 9.5x19x6.35 INOX, RBF 12.7x25.4x6.35 INOX, KEL 9.5x28.6x6.35 INOX, KEL 12.7x28.6x6.35 INOX						
Carbide Burr Set - 1/4" - Cut ALU Aluminium							
Assorted	5 Piece Set		26005695	4007220818060	1	\$345.77	
Contents:	TC-C 1458-4 ALU, TC-C 121-4 ALU, TC-E 1278-4 ALU, TCF-121-4 ALU, TC-L 12118-4 ALU						

Burrs

Cuts for universal applications

Cut 3 PLUS (MX according to DIN 8033)

- Cross cut
- Machining of cast iron, steel < 60 HRC, stainless steel (INOX), nickel-based alloys and titanium alloys
- High stock removal

Cut 5 (F according to DIN 8033)

- Fine machining of cast iron, steel < 60 HRC, stainless steel (INOX) and high-temperature-resistant materials such as nickel-based and cobalt-based alloys
- Good surface

Burrs

Cuts for universal applications

Cut 3 PLUS

(MX according to DIN 8033)

- Cross cut
- Machining of cast iron, steel < 60 HRC, stainless steel (INOX), nickel-based alloys and titanium alloys
- High stock removal

Cut 5

(F according to DIN 8033)

- Fine machining of cast iron, steel < 60 HRC, stainless steel (INOX) and high-temperature-resistant materials such as nickel-based and cobalt-based alloys
- Good surface

Cuts for high-performance applications

Cut TOUGH

- High stock removal performance on cast iron, steel < 55 HRC
- High stock removal
- Extreme impact resistance
- Also suitable for use with high surface contact angles > 1/3 and under impact loads

Cut ALU

- High stock removal performance on aluminium and aluminium alloys, light metals, non-ferrous metals and plastics
- Smooth milling

Cut NON-FERROUS

- High stock removal performance on non-ferrous metals, brass, copper, plastics and fibre-reinforced plastics
- Universally usable

Cut INOX

- Extremely high stock removal performance on all austenitic, rust - and acid-resistant steels, stainless steel (INOX)
- Substantially reduced vibration and less noise

Cut MICRO

- Good stock removal on almost all materials < 68 HRC
- High surface quality
- Reduced vibration and less noise

General information

PFERD quality

PFERD mounted points are developed, manufactured and tested according to the highest quality standards. Research and development, our own machine and plant construction, as well as the continuous monitoring of the production processes guarantee the high quality of PFERD products. PFERD quality management is certified according to ISO 9001.

Customer consultation

If you have any questions regarding the optimization of your grinding work or solutions to specific application problems, our sales representatives and technical advisors will be happy to help.

Visit us: www.pferd.com.au

Or call **1300 073 373**

PFERDVIDEO

You will receive more information here or at www.pferd.com.au

Products made to order

If you cannot find the solution for your particular application in our comprehensive product catalogue, we can produce mounted points in premium PFERD quality on request, tailor-made to meet the requirements of your job.

We take account of your requirements and wishes, drawings, information on bonds and hardness, grit sizes, grit types, shapes, dimensions, shanks and packaging.

Please contact our sales representatives!

We will be happy to advise you.

Mounted point dia. [mm]	Cutting speeds [m/s]						
	10	15	20	25	30	40	50
	Rotational speeds [RPM]

50	3,800	5,700	7,600	9,500	11,500	15,300	19,100

Recommended rotational speed range

Refer to the table for the recommended rotational speed based on the diameter and cutting speed of your tool.

The recommended cutting speeds can be found in the introductory descriptions of the various hardness grades in this catalogue.

Note:

The optimum rotational speeds can be found in the product tables. These have been limited to 150,000 RPM, as conventional drives do not permit a higher rotational speed.

Example:

Mounted point dia. 20 mm

STEEL EDGE

Cutting speed: 30–50 m/s

Rotational speed: 28,600–47,700 RPM

Explanation of the code system according to EN 12413

D = Mounted point outer dia.

T = Mounted point width

S_d = Shank dia.

L_0 = Unsupported shank length

L_2 = Shank length

L_3 = Clamping length of shank

Safety notes

All PFERD mounted points are approved for a maximum operating speed of 50 m/s. The maximum permitted rotational speeds for the various shank lengths and shank diameters are defined in DIN 69170 based on EN 12413. These must be adhered to in order to avoid buckling of the shank during use. Regardless of the shank length, the clamping length (L_3) of the shank must be at least 10 mm.

The maximum permitted rotational speed calculated according to EN 12413 is determined by the following factors:

- Shape and dimensions of the mounted point
- Diameter of the steel shank S_d
- Unsupported shank length L_0

Each packaging unit of PFERD mounted points comes with rotational speed specifications for the unsupported shank length (L_0) of that mounted point. Proper concentric accuracy and correct clamping of the tool drive must also be ensured.

Tables with the maximum permitted rotational speeds for the entire PFERD mounted point product range are available on request.

Mounted Points

The fast way to the best tool

PFERD offers a very extensive range of ceramic-bonded and resinoid-bonded mounted points. Designed to meet individual grinding tool application needs, these products come in a broad range of grain types, grit sizes, hardness grades and shapes. The mounted points are manufactured on modern production lines to high standards of dimensional accuracy and stability, consistent quality and close tolerances. To select the correct mounted point, the material, main fields of application and specific operating requirements have to be taken into consideration.

This overview shows which types (abrasives and bonds) are suitable for the various materials and the tasks at hand.

1 Material group

The various material groups are colour-coded and form the starting point for choosing the most appropriate mounted point.

2 Application

After the material, the application must be selected. This differentiation is necessary in order to find the optimum mounted point and correct bond type. The mounted point bond, hardness and grain mixture have a decisive impact on the abrasive performance, tool life and aggressiveness of the tools:

1 Material group			Bond ▶
			3 Mounted point type ▶
			Abrasive ▶
			Recommended cutting speed ▶
			2 Application ▼
Steel, cast steel	Steels up to 1,200 N/mm ² (< 38 HRC)	Construction steels, carbon steels, tool steels, non-alloyed steels, case-hardened steels, tempering steels	General use on edge and surface
			Surface grinding with high stock removal rate
			Edge grinding with high dimensional stability
	Hardened, heat-treated steels over 1,200 N/mm ² (> 38 HRC)	Tool steels, tempering steels, alloyed steels	General use on edge and surface
			Surface grinding with high stock removal rate
			Edge grinding with high dimensional stability
	Cast steel	Non-alloyed cast steel, low-alloyed cast steel	General use on edge and surface
			Surface grinding with high stock removal rate
			Edge grinding with high dimensional stability
Stainless steel (INOX)	Rust and acid-resistant steels	Austenitic and ferritic stainless steels	Surface grinding with high stock removal rate
			Edge grinding with high dimensional stability
Non-ferrous metals	Soft non-ferrous metals, non-ferrous metals	Aluminium alloys, brass, copper, zinc	General use on edge and surface
	Hard non-ferrous metals	Bronze, titanium, titanium alloys, hard aluminium alloys	
	High-temperature-resistant materials	Nickel-based and cobalt-based alloys (engine and turbine construction)	
Cast iron	Grey cast iron, white cast iron	Cast iron with flake graphite EN-GJL (GG), with nodular graphite/nodular cast iron EN-GJS (GGG), white annealed cast iron EN-GJMW (GTW), black cast iron EN-GJMB (GTS)	Surface grinding with high stock removal rate
			Edge grinding and grinding out of metal contamination with high dimensional stability
Plastics, other materials		Fibre-reinforced plastics, thermoplastics, rubber, wood	General use on edge and surface
			4 Catalogue page * ▶

* Tool Manual 23

- **General use:** For general use on surfaces and edges, the emphasis is on the balance between abrasive performance and tool life.
- **Surface grinding:** In surface grinding, the mounted points are subject to lower loads. The mounted point bond is therefore comparatively soft and has been designed to give high stock removal rates.
- **Edge grinding:** In edge grinding, the mounted points must be dimensionally stable. The mounted point bond is therefore comparatively hard and designed for a long tool life.

3 Mounted point type

After determining the application (see column 2), the type is selected in the horizontal row.

The "highly suitable" types are indicated by a black dot (●). Further "suitable" types are indicated by an open dot (○).

4 Reference to catalogue page

Further information about the hardness grades, mounted point shapes and dimensions, as well as grit sizes, can be found on the corresponding catalogue pages stated in the table.

ZY 2025 6 ADW 30 M 5 V STEEL

① ② ③ ④ ⑤ ⑥ ⑦ ⑧ ⑨

① Shapes according to DIN 69170

ZY = Cylindrical  WR = Cylindrical with radius end  KE = Conical with radius end 
 SP = Pointed tree  KU = Ball  TO = Cup 

US shapes according to ANSI B74.2

Series W (cylindrical mounted points in inch dimensions), series A and B (other shapes)

② Dimensions

The first digits of the description indicate the mounted point outer diameter D and mounted point width T in mm:

3 mm x 6 mm = 0306 20 mm x 25 mm = 2025 50 mm x 13 mm = 5013

US dimensions

Series W cylindrical mounted points and series A and B shaped mounted points are specified by a number (e.g. W 143).

③ Shanks

Only the shank diameter is given in the description. The shank length is determined as follows:

Shank dia. 3 mm = 30 mm shank length Shank dia. 1/8" = 1 1/4" shank length
 Shank dia. 6 mm = 40 mm shank length Shank dia. 1/4" = 1 1/2" shank length
 Shank dia. 8 mm = 40 mm shank length

④ Abrasives

In general, two grain types are used, with internationally defined descriptions according to ISO 525:

A = Aluminium oxide (Al₂O₃)

C = Silicon carbide (SiC)

The following abbreviations are used in order to specify the grain mixtures more precisely, beyond ISO 525:

AD = Aluminium oxide, dark red

ADW = Aluminium oxide mixture AD + AW

AW = Aluminium oxide, white

ARN = Aluminium oxide mixture AR + AN

AR = Aluminium oxide, pink

ADR = Aluminium oxide mixture AD + AR

AN = Aluminium oxide, regular

AWCO = Aluminium oxide mixture AW + CO

AH = Bubble grain aluminium oxide

CN = Silicon carbide, green

CU = Silicon carbide, grey

CO = Ceramic oxide grain

⑤ Grit sizes according to ISO 525 and ISO 8486

The grit sizes used in PFERD mounted points are determined by the shape and diameter of the mounted point.

In this example, **grit size 30** is used.

⑥ Hardness grades according to ISO 525

Hardness grades are classified using letters in alphabetical order to specify the hardness from soft to hard.

This example concerns a mounted point with **hardness M**.

Hardness grade coding				Property
A	B	C	D	Extremely soft
E	F	G	–	Very soft
H	I	J	K	Soft
L	M	N	O	Medium
P	Q	R	S	Hard
T	U	V	W	Very hard
X	Y	Z	–	Extremely hard

⑦ Structure according to ISO 525

The internationally valid scale for structural density ranges from 1 = dense to 14 = open (porous) structure.

In this example, the structural density is specified by the number **5**.

⑧ Bond according to ISO 525

Bond types are indicated with the following internationally standardized letters:

V = Vitrified bond

B = Resinoid bond

⑨ Material-specific description

The material-specific description indicates the material to be processed.

STEEL = Universal for steel and cast steel

STEEL EDGE = Specialist for use on edges for steel and cast steel

Structure of coated abrasives

PFERD supplies a wide range of tools with coated abrasives for machining a variety of workpiece geometries and materials:

- COMBICLICK fibre discs
- Fibre discs
- COMBIDISC abrasive discs
- Abrasive spiral bands and abrasive belts
- Mounted and unmounted flap wheels
- Abrasive sheets and shop rolls
- POLIROLL cartridge rolls and POLICO abrasive cones
- Velcro-backed abrasive discs
- Self-adhesive abrasive discs (PSA)

You can find additional PFERD tools with coated abrasives in catalogue section 6.

Coated abrasives are used for both wet and dry grinding.

1 Backing material

Bond and abrasive grain are applied to the base. The backing materials available for selection differ in their properties, such as tear strength, flexibility and wear. The respective grinding tool is adapted to the requirements of the intended application by choosing the appropriate base material. The PFERD range is sub-divided into three groups:

Paper:

The main areas of application for coated abrasives with a paper base are in the woodworking industry and in trade, e.g. among carpenters, painters and decorators. Coated abrasives with a paper base are rarely used for industrial metalwork.

Abrasives for manual grinding are predominantly made from paper with a surface weight of 70 to 100 g/m². Heavier paper types are used to make abrasives for machine applications involving wide and narrow belts alike.

Cloth:

Coated abrasives with a cloth base are predominantly used for metalwork.

Vulcanized fibre:

When adapted to the corresponding applications, vulcanized fibre in various thicknesses is predominantly used for making fibre grinding discs. Vulcanized fibre is a very sturdy, robust backing material, and also very wear-resistant.

2 + 3 Bond

When manufacturing coated abrasives, different resin bonds are used to fix the abrasive grain to the backing material. First, the backing material is coated with the base bond (2). After this, the abrasive grain is evenly scattered over the surface and aligned to achieve higher aggressiveness with the help of special procedures. The coating bond (3) ensures that the abrasive grain is fixed in place and protects the grain against the forces and loads resulting from the grinding process.

4 Abrasive grain

Choosing the right abrasive grain has a significant influence on surface quality and profitability. The most common materials for abrasive grain are:

Aluminium oxide A

Ceramic oxide grain CO

Zirconia alumina Z

Silicon carbide SiC

VICTOGRAIN

* Please refer to tool manual 23, Catalogue 4, page 10 for more coated abrasives information.

Grit sizes

The various grit sizes for coated abrasives are specified in ISO 6344 and have been adopted for FEPA standards:

Coarse	Medium	Fine	Superfine
P 12 – 16 – 20 – 24 – 36 – 40 – 50 – 60 – 80	P 100 – 120 – 150 – 180 – 220 – 240 – 280	P 320 – 360 – 400 – 500 – 600	P 800 – 1000 – 1200 – 1500

5 Active grinding layer

The use of an active grinding layer considerably increases the stock removal rate and reduces the workpiece temperature.

This is especially advantageous for materials with poor heat-conducting properties, such as stainless steel (INOX).

PFERD tools with an active grinding layer feature the additional "COOL" label in their item description.

Fine Grinding and Polishing Tools

Surface roughness – influencing factors and reference values

Factors influencing the surface roughness:

Abrasives:

- The coarser the grit, the rougher the surface achieved
- Aluminium oxide, ceramic oxide grain and zirconia alumina achieve similar degrees of surface roughness
- Workpieces that are machined with silicon carbide display a slightly finer surface finish

Material to be machined:

- The softer the material to be machined, the coarser the surface produced when using the same grit size
- By adding grease or lubricant, a slightly finer surface finish is achieved

Machining parameters:

- The relationship between cutting speed and feed has the following effects:
 - By increasing the cutting speed, the surface quality is slightly improved
 - By reducing the feed speed, the surface quality becomes slightly finer
- The contact pressure has only a very slight effect on the surface roughness

There is a differentiation between the following roughness depths:

The **individual roughness depth R_{zi}** is the sum of the height of the largest profile peak and the depth of the largest profile trough within an individual measuring section.

The **roughness depth R_z** is the mean value of the individual roughness depths (R_{zi}) of consecutive individual measuring sections.

The **roughness depth R_{max}** is the largest individual roughness depth within the overall measuring section.

The **average roughness value R_a** is the arithmetic mean value of the sum of all profile values within the roughness profile.

Guide values for degrees of surface roughness with different machining applications:

Application	Surface roughness
Coarse grinding: Grit sizes 24 to 150	$R_a = 0.70$ to $12 \mu\text{m}$
Fine grinding: Grit sizes 180 to 400	$R_a = 0.20$ to $0.70 \mu\text{m}$
Polishing: Step 1: Step 2: Step 3:	$R_a = 0.10$ to $0.20 \mu\text{m}$ $R_a = 0.04$ to $0.10 \mu\text{m}$ $R_a < 0.01 \mu\text{m}$
Texturing: Surfaces 2G 80 to 2G 320	$R_a = 0.20$ to $0.70 \mu\text{m}$
Satin finishing/ matt finishing: With non-woven material	$R_a = 0.10$ to $0.70 \mu\text{m}$

Surface roughness of various materials

following machining with tools using coated abrasives

PFERDERGONOMICS

The **PFERDERGONOMICS** program aims at the long-term reduction of dust, noise and vibration levels produced by tools, and on perceptibly increasing tool haptics.

The focus is on people.

Recognize straight away the areas where our tools offer you advantages.

Tools with **PFERDERGONOMICS** properties are marked with corresponding pictograms.

For more information and appropriate PFERD tools, see the brochure '**PFERDERGONOMICS** – The focus is on people'.

PFERDVIDEO

You will receive more information here or at www.pferd.com.au

The patented quick-mounting and cooling system from PFERD is suitable for use with fibre, non-woven and felt discs.

The COMBICLICK system consists of a specially developed backing pad and a rugged mounting system at the back of the tool. With the backing pad, COMBICLICK tools can be used on commercially available angle grinders.

The special geometry of the cooling slots ensures high air throughput, which in turn considerably reduces the thermal load on the abrasive material and the workpiece.

Compared to conventional tools, the quick-mounting system, the robust holder, the safe fixing of the tool and the integrated cooling system together provide

- up to 30 % lower workpiece temperature,
- up to 25 % increased stock removal,
- up to 30 % longer tool life and improved utilization of the

Lower process costs and workpiece temperature

Higher stock removal rate

Longer tool life

Advantages:

System

Very easy and comfortable to use.

Mounting principle

Extremely fast and easy tool change reduces process costs.

Cooling effect

Very good cooling of tool and workpiece.

Flexible grinding

Soft and particularly flexible grinding performance in face-down grinding.

COMBICLICK allows very flat use!

Fibre discs

With COMBICLICK, scratches caused by prominent clamping parts are prevented and very high utilization of the available abrasive is attained.

COMBICLICK fibre discs

PFERDERGONOMICS recommends COMBICLICK as an innovative tool solution to sustainably reduce vibration, noise and dust levels produced by tools, and to improve working comfort.

PFERDVIDEO

You will receive more information here or at www.pferd.com.au

GERMAN FEDERAL AWARD

FOR OUTSTANDING INNOVATION
IN THE CRAFTS SECTOR
INTERNATIONALE HANDWERKSMESSE
[INTERNATIONAL CRAFTS FAIR]

The wide range of COMBICLICK fibre discs offers the best tool for any grinding application, from coarse to fine.

Advantages:

- Innovative quick-mounting system guarantees convenient handling and cool grinding.
- High profitability thanks to long tool life and very high stock removal rate.
- Consistent surface finish thanks to high-quality abrasives.

Applications:

- Levelling
- Deburring
- Surface work
- Work on edges
- Work on weld seams
- Step-by-step fine grinding

Recommendations for use:

- Use COMBICLICK fibre discs with COMBICLICK backing pads on commercially available angle grinders.
- Use grinding oil which is suitable for the material in order to considerably increase the tool life and abrasive performance of the tools. More detailed information and ordering data for grinding oils can be found on page 155.
- For particularly flexible performance when face-down grinding, use fibre discs with a diameter of 125 mm.

Matching tool drives:

- Angle grinders
- Cordless angle grinders

Ordering notes:

- Please order COMBICLICK backing pads separately. More detailed information and ordering data for backing pads can be found on page 19.
- When ordering, please state the EAN or the full description.
- Ordering example:
EAN 4007220722275
CC-FS 125 A-COOL 60
- Ordering example explanation:
CC-FS = COMBICLICK fibre disc
125 = Outer diameter D [mm]
A = Abrasive
COOL = Bond type
60 = Grit size

Safety notes:

- The maximum permitted peripheral speed is 80 m/s.
- For safety reasons, the specified maximum permitted rotational speed must never be exceeded.

Accessories:

- COMBICLICK backing pads

High-performance tools with **VICTO** GRAIN abrasive grain

VICTOGRAIN products are some of the most effective grinding tools in the world.

PFERD's triangular, precision-formed abrasive grain achieves uniquely high abrasive performance.

The **VICTO**GRAIN abrasive grain triangles are identical in shape and size and their cutting edges are applied to the workpiece at the optimum angle, meaning the grain needs very little energy to penetrate the workpiece. As such, the user benefits from an efficient machining process with

- fast working,
- a long tool life,
- less heat build-up in the workpiece, and
- a lower power output required for the tool drive.

The **VICTO**GRAIN abrasive grain triangles are fixed to the substrate on one of their sides. This means they are securely fixed in place and, together with their slim design, offer an extremely large chip space in order to further improve machining efficiency.

The structure of the triangular **VICTO**GRAIN has also been specially adapted to maximize results. The very small crystals inside the triangles ensure optimal wear characteristics as sharp cutting edges are always exposed, but only the minimum amount of abrasive grain/the triangle breaks off.

By combining all these properties together, users benefit from optimal, constant performance during cool grinding and an extremely long tool life together with consistent workpiece surface roughness.

The **VICTO**GRAIN abrasive grain is optimally aligned

VICTOGRAIN abrasive grain

In use in many industries

The use of efficient tools for work on surfaces and cutting materials is an important factor for ensuring profitability in many processes and industries.

For many materials and applications, tools with super-hard abrasives like diamond or CBN (cubic boron nitride) abrasives provide a cost-effective alternative to conventional tools.

With their high hardness, they have a particularly long tool life and are an established problem-solver in many industries:

- Automotive industry and suppliers
- Energy industry
- Foundries (grey and nodular cast iron)
- Ceramic industry
- Plastics processing (GRP/CRP)
- Machine and plant construction
- Medical equipment
- Tool and mould construction
- Tool industry

Super-hard abrasives

Diamond and CBN form the group of super-hard abrasives.

Diamond is the hardest naturally occurring solid. It consists of pure carbon in a crystalline structure. For grinding tools, the diamonds used are generally synthetic, produced at very high temperatures under high pressure. The properties of the abrasive can be optimized for the subsequent application of the tool.

CBN (cubic boron nitride) is the second-hardest solid known. It consists of boron and nitrogen in a crystalline structure.

For work on certain materials, diamond and CBN tools are an economic alternative to tools with conventional abrasives such as aluminium oxide and silicon carbide. Diamond and CBN grain is much harder and its cutting edges are very resistant to blunting. Diamond and CBN tools therefore enjoy a very long tool life.

Materials

Diamond and CBN abrasives are used when materials cannot be machined with conventional abrasives such as aluminium oxide or silicon carbide. They also provide a more economical solution for many applications.

Due to high chemical wear, rotating diamond tools are not suitable for work on steel. CBN tools are used for these applications. The two abrasives complement each other ideally. In the adjacent overview, you will find various materials associated with the abrasives.

Using the colour coding system, the abrasive of the tool can be identified immediately.

Diamond = blue

- Duroplastics, in particular with glass or carbon fibre reinforcement (GRP and CRP)
- Ferrite (magnetic material)
- Glass
- Graphite and synthetic carbon
- Grey and nodular cast iron
- Tungsten carbide
- Nickel- or titanium-based superalloys
- Technical ceramics
- Wear-resistant coatings (powder metal alloys and hardfacing alloys)

CBN = red

- Case-hardened steels
- Roller-bearing and ball-bearing steels
- Tool steels
- Other hardened steel materials with a hardness from approx. 54 HRC

PFERD quality

PFERD diamond and CBN grinding tools comply with the highest quality and safety requirements and are manufactured and labelled according to the European safety standard EN 13236.

In addition to the high quality standards, occupational health and safety as well as ergonomics play a prominent role.

PFERD quality management is certified according to ISO 9001.

Diamond and CBN Tools

General information

Grit sizes

The grit size data for diamond and CBN tools relates to the average grit diameter in [µm]. Thus, the higher the number specified in the grit designation, the coarser the grit size. A coarse grit size increases stock removal and the surface roughness of the workpiece.

Selecting the optimum grit size depends on the intended application, the material to be machined, the tool drive employed and a wide range of other factors. As a general rule, the harder the material to be worked and the finer the desired surface roughness, the finer the selected grit size should be.

Grit sizes	Grit designations [µm] ISO 6106 (FEPA Standard)		Equivalent US mesh number/inch US Mesh Size
	Diamond	CBN	
Micro-grit  Very fine Smaller Grit size Larger Very coarse	D 25 / D 30	-	-
	D 46	B 46	325/400
	D 54	B 54	270/325
	D 64	B 64	230/270
	D 76	B 76	200/230
	D 91	B 91	170/200
	D 107	B 107	140/170
	D 126	B 126	120/140
	D 151	B 151	100/120
	D 181	B 181	80/100
	D 213	B 213	70/80
	D 251	-	60/70
	-	B 252	60/80
	D 301	B 301	50/60
	D 357	B 357	45/50
	D 427	B 427	40/50
	D 502	-	35/45
	D 602	-	30/40
	D 711	-	25/30
	D 852	-	20/30
	D 1001	-	16/20

The recommended cutting speed ranges depend on the application and must not exceed the maximum permissible peripheral speed. Because of the wide range of tasks and application fields of electroplated diamond and CBN tools, as well as the large influence of the employed tool drive, it is not possible to specify a generally valid cutting speed. The recommended cutting speed ranges serve as reference values.

Generally, the following applies:

- In dry grinding, do not use diamond tools at too high a cutting speed in order to avoid thermal damage to the abrasive.
- If possible, do not use CBN tools under the cutting speeds specified below. The optimum cutting speed has a direct effect on the economic value of the tools in use.
- All parameters must always be coordinated with each other within the grinding process. If the cutting speed is changed, among others the feed, infeed and coolant supply must be adjusted accordingly.
- Electroplated diamond and CBN tools can be used in dedicated stationary applications up to a peripheral speed of 125 m/s.

Cutting speed [m/s] ►			5	10	15	20	25	30	35	40	45	...	80
Electroplated bond	Diamond	Dry grinding			8-18 m/s					30-80 m/s			
		Wet grinding				15-25 m/s							
	CBN	Dry grinding				15-25 m/s							
		Wet grinding					20-40 m/s						
Resinoid bond	Diamond	Dry grinding			15-20 m/s								
		Wet grinding				20-30 m/s							
	CBN	Dry grinding				18-30 m/s							
		Wet grinding					25-40 m/s						
	Diamond	Dry grinding		10-15 m/s									
		Wet grinding			15-30 m/s								
	CBN	Wet grinding					25-30 m/s

PFERD quality

All PFERD tools are developed, manufactured and tested in accordance with the strictest quality requirements. As a founding member of the "Organization for the Safety of Abrasives (oSa)", PFERD has committed to conform to tougher inspection requirements that even go beyond EN 12413 and EN 13743.

PFERD quality management is certified according to ISO 9001.

PFERD support and training

PFERD offers you individual targeted support to solve your application problems. The experienced sales representatives and technical advisers at PFERD will be pleased to assist you. Please contact us.

In the PFERD Training, we provide highly specialized and practical knowledge from the world of grinding and cutting. The seminar blocks follow on from each other and enable you to become a PFERD tool specialist.

PFERD TOOL-CENTER

On the PFERD TOOL-CENTER of your local retailer, you will find all the important information required for selecting the most appropriate tool. The PFERD information and symbol cards provide important tips about tools and applications.

If you have any questions, your local retailer or PFERD sales representative will be happy to help you.

Products made to order

If you cannot find the solution for your particular application in our standard product range, PFERD can produce tailor-made cut-off wheels, flap discs and reinforced grinding wheels specifically for your application on request.

Taking into account the processing objective, the material to be worked and the conditions, we offer individual advice with the aim of finding the best and most economical solution for you.

Results from the PFERD test laboratories as well as from the product tests by independent testing institutes prove: PFERD tools offer measurable added value.

Discover PFERDERGONOMICS and PFERDEFFICIENCY:

As part of PFERDERGONOMICS, PFERD offers ergonomically optimized tools and tool drives that contribute to greater safety and working comfort, and thus to health protection.

As part of PFERDEFFICIENCY, PFERD offers innovative, high-performance tool solutions and tool drives with outstanding added value.

PFERDVIDEO

You will receive more information here or at www.pferd.com.au

Grinding & Polifan Wheels

Product lines

For the wide variety of abrasive grinding applications in industry and crafts PFERD now offers three types of reinforced grinding wheels with their proven colour coding system:

PSF ★★☆☆

Universal line

General use in industry and trades

SG ★★★★★

Performance line

Widest range of tools for professional use in industry and trades

SGP ★★★★★

Special line

For special industrial applications

The PFERD range of reinforced grinding wheels meets state-of-the-art requirements, providing outstanding stock removal, handling convenience, and high cost-efficiency.

Reinforced grinding wheels made by PFERD are manufactured to the most stringent quality standards. Operator health risks are reduced through minimised vibration levels and high dimensional stability.

The development of new, specialised grinding tools such as CC-GRIND and CC-GRIND-SOLID have further redefined the task of grinding. Very high stock removal rates combined with reduced noise, dust and vibration enable efficiencies never seen before in metal grinding applications.

POLIFAN flap discs can offer advantages over reinforced grinding wheels where a superior surface finish must be achieved in addition to high stock removal rates.

The wide range of high-grade abrasive flap types and proven special-purpose versions available from PFERD meet the demands of the most exacting and difficult grinding tasks while reflecting the specific properties of each material.

The high-performance flap disc

POLIFAN - STRONG with its exceptional abrasive qualities and tool life and the flap disc

POLIFAN - CURVE for fillet weld grinding are examples of these PFERD innovations .

Cut-Off Wheels

Product lines

PFERD cut-off wheels provide optimum abrasive results.

Choose from three product lines with different performance characteristics to match the specific material, power tool type and machining task.

PSF ★★☆☆

Universal line

General use in industry and trades

SG ★★★★★

Performance line

Widest range of tools for professional use in industry and trades

SGP ★★★★★

Special line

For special industrial applications

The highly differentiated product lines can be used for all practical machining tasks. You can always choose the optimal cut-off wheel for the respective application.

Overview of shapes and letter symbols

Safety during cutting and grinding

Grinding tool manufacturers, machine manufacturers and users contribute equally to ensuring safety during cutting and grinding.

PFERD produces all its tools according to the specified safety regulations. During cutting and grinding, the user is responsible for correct use of the tool drive as well as correct handling and use of the tools.

The information required for the safe use of grinding wheels, cut-off wheels, cup wheels, flap wheels, POLIFAN flap discs and CC-GRIND grinding discs from PFERD is summarized here. In addition to this, user information relating to the grinding machine used, as well as the applicable provisions on health and safety at work, should always be observed.

Explanation of the labelling of grinding tools

- Always observe the instructions on the grinding tool, the grinding machine and all accompanying user information.
- Only use grinding tools that meet current safety standards. These products carry the relevant EN standard number and the "oSa" mark:
 - EN 12413 for grinding tools with bonded abrasives (grinding wheels, cut-off wheels, cup wheels and snagging wheels)
 - EN 13743 for coated abrasives (POLIFAN flap discs)
- Use a grinding tool that is suitable for the respective application. A tool that cannot be clearly identified should never be used.
- Grinding tools for hand-held grinding with bond types B (e.g. cup wheels) and BF (grinding wheels, cut-off wheels and snagging wheels) must not be used after the indicated expiry date in accordance with EN 12413. The expiry date is stated as the month and year, e.g. 04/2021. The bond type is always marked on the label.
- Observe any use restrictions, warnings and safety instructions:

= Not permitted for hand-held grinding!

= Not permitted for face grinding!

= Not permitted for wet grinding!

= Do not use if damaged!

= Follow the safety instructions!

= Wear eye protection!

= Wear hearing protection!

= Wear gloves!

= Wear a dust mask!

= Observe the minimum contact angle!

Storage of grinding tools

- Grinding tools should be stored in such a way as to prevent any adverse effects caused by moisture, frost or large temperature variations so as to avoid mechanical damage. Do not use resinoid-bonded grinding tools or grinding tools using coated abrasives that have been exposed to severe humidity, damp or high temperatures.

Mounting of grinding tools

- Only use grinding machines that are intended for use with the relevant tool.
- Never use a grinding machine that is not in good condition.
- Use only grinding tools with an outer diameter and bore diameter and/or thread that match the specifications of the grinding machine.
- Do not use damaged grinding tools. Grinding tools must be visually inspected and checked for any possible damage before each use.
- Keep mounting components clean and in good mechanical condition. Replace them if they become damaged or worn. If the manufacturer of the grinding machine provides devices for securing the grinding tool (e.g. a key), then these must be used. Tighten the clamping mechanism by hand.
- In principle, only clamping flanges with a contact surface with the same outer diameter and that are identically shaped on the contact side may be used.

- Use blotters between the grinding tool and clamping components, if provided.
- Prevent the grinding machine from accidentally turning on, before mounting or changing the grinding tool by disconnecting the power supply.
- Never exceed the maximum operating speed of a grinding tool. Make sure that the rotational speed of the grinding machine (rev/min, 1/min, RPM or min⁻¹) does not exceed the maximum permissible speed given on the grinding tool, the accompanying label or packaging. The remounting of worn grinding tools on smaller grinding machines is not permitted.
- Do not make any unauthorized changes to grinding tools.
- Each time that a tool is mounted, perform a trial run at operating speed, with the protective cover properly installed, for at least 30 seconds. During the trial run, hold the grinding machine in such a way that in the event of any failure of the grinding tool, you will not be struck by any fragments.
- Stationary cut-off wheels must only be used on appropriate stationary cut-off grinding machines. They are not permitted for hand-held or manually guided grinding. If a maximum power output of the machine is indicated on the cut-off wheel, it must never be exceeded.

Use of grinding tools

- Use a grinding tool that is suitable for the respective application. A tool that cannot be clearly identified should never be used.
- Always be aware of the potential dangers during use of grinding tools.
- Always use protective equipment and covers in compliance with the operating instructions for the grinding machine and make sure they are properly mounted and in good condition before you switch on the grinding machine. The protective cover must always be positioned in such a way that it is located between the operator and the tool. Sparks should not fly in the direction of the operator.
- The workpiece must be fixed without tension by appropriate clamping devices or by its own weight.

- The grinding machine must always be turned on before the grinding tool comes into contact with the workpiece.
- Always bring grinding tools carefully into contact with the workpiece surface.
- Always guide cut-off wheels in a straight line. No lateral load should be applied to the cut-off wheel and it should not be used for face grinding.
- Grinding machines may only be put down once they have been turned off and have come to a complete stop.

Hazards due to tool breakage, abrasive particles, sparks, dust, fumes, noise, vibration and bodily contact with the grinding tool

- The use of appropriate personal protective equipment is required for all grinding operations to provide protection against mechanical impacts, abrasive particles, sparks, dust and fumes, noise and vibration. This includes eye protection, hearing protection, respiratory protection and hand protection. Long-sleeved, flame-resistant clothing and appropriate safety footwear must be worn. Tie back long hair and do not wear loose clothing, ties or jewellery. These rules not only apply to the operator of the grinding machine but also to any other persons in the working environment.
- Inhalation of grinding dust can lead to lung damage. Make sure that sufficient extraction or other appropriate measures are provided during grinding work.
- Do not use grinding tools in the vicinity of flammable materials. Flammable and explosive substances must be removed from the working environment before starting work. This includes, for example, dust deposits (especially aluminium dust), cardboard, packaging material, textiles, wood and wood chips, as well as flammable liquids and gases.
- Ensure appropriate extraction and avoid sources of ignition, as explosive dusts can be created when cutting and grinding aluminium. Grinding dusts from steels and aluminium must not be mixed.
- In the event of excessive vibrations stop the grinding machine and investigate the cause of the vibration. Take immediate action, when using a grinding tool, if you begin to experience tingling, stinging or numbness in the hand or arms.
- Never remove fitted safety devices from grinding machines and ensure that they are in good condition and properly installed before starting the grinding machine.
- After switching off the grinding machine, ensure that it has come to a complete stop before leaving it unattended.

Disposal of grinding tools

- Worn or defective grinding tools must be disposed of according to all applicable regulations.
- Note that grinding tools may become contaminated by work on certain materials.
- Grinding tools for disposal should be destroyed in a clearly visible manner in order to prevent re-use.
- Further information can be obtained from your supplier's voluntary product information and safety data sheets.

High-performance tools with VICTOGRAIN abrasive grain

The VICTOGRAIN abrasive grain triangles are identical in shape and size and their cutting edges are applied to the workpiece at the optimum angle, meaning the grain needs very little energy to penetrate the workpiece. As such, the user benefits from an efficient machining process with

- fast working,
- a long tool life,
- less heat build-up in the workpiece, and
- a lower power output required for the tool drive.

VICTOGRAIN abrasive grain

Quality

Large diameter cut-off wheels from PFERD are developed, manufactured and tested in accordance with the strictest quality requirements.

Research and development, our own machine and plant construction, and the continuous testing and further development of the quality and safety standards in our own laboratories all guarantee the high PFERD quality.

PFERD quality management is certified according to ISO 9001.

PFERD is a founder member of oSa

Together with other renowned manufacturers, PFERD has voluntarily undertaken to produce quality tools conforming to the most exacting safety standards.

Member companies of oSa (the Organization for Safety of Abrasives) are committed to continuous product safety and quality monitoring. PFERD tools carry the oSa mark.

Safety standard

PFERD cut-off wheels conform to the highest safety requirements and are marked according to EN 12413 for grinding tools made of bonded abrasives.

PFERDVIDEO

You will receive more information here or at www.pferd.com.au

Maximum operating speed

The maximum permissible operating speed [m/s] can be found on the product labels and in the product tables of this catalogue. The maximum permissible rotational speed specification applies to the nominal diameter of the unused wheels. For safety reasons, these must never be exceeded.

Differentiation of cut-off grinding

A differentiation is made between cold, warm and hot cutting-off, depending on the material temperature of the workpieces.

Operating conditions Operating parameters	Cold cut-off	Warm cut-off	Hot cut-off
Material temperature T	up to 100°C	100 to 600°C	600 to above 1,000°C
Peripheral speed V_s^*	80 to 100 m/s	80 to 100 m/s	80 to 100 m/s
Specific cutting performance Z	4 to 15 cm ² /s	8 to 20 cm ² /s	15 to 35 cm ² /s

* Please adhere to the maximum operating speed of the cut-off wheel.

Advantages of large diameter cut-off grinding

- Universal cutting process for all steels and castings, non-ferrous metal alloys, special alloys such as nickel and titanium-based alloys, as well as materials on which sawing and flame cutting are difficult or impossible.
- Due to smooth cutting surfaces and blank cuts in cold cutting-off, no post-processing is required.
- Short cutting times regardless of the material quality.
- Significantly lower burr formation with hot cutting-off than with hot sawing.
- Lower noise levels than with hot sawing, for example:
Hot cutting-off: 85 to 95 dBA
Hot sawing: 105 to 110 dBA
- Consistent cutting quality over the entire life of the cut-off wheel due to its continuous selfsharpening qualities.
- Cutting of already cooled rolled or forged parts in hot cut lines is possible.

Safety notes

= Wear eye protection!

= Wear hearing protection!

= Wear a dust mask!

= Wear gloves!

= Please read the safety notes!

= Not permitted for hand-held or manually guided grinding!

= Do not use if damaged!

Large Diameter Cut-Off Wheels

General information

Proper clamping of cut-off wheels

The correct clamping of the cut-off wheel is a prerequisite for optimum performance and is essential to ensure user safety. The adjacent illustration shows the right way to do it:

1. Machine spindle with high concentricity.
2. Equally sized flanges.
3. Intermediate paper layers, if required for secure clamping and safe use.

Our recommendations:

- After every second wheel change, change the intermediate paper layers.
- As from a wheel diameter > 400 mm, always use intermediate paper layers.

Safety notes:

The safe use of PFERD tools depends largely on proper clamping systems. Both flanges between which a grinding tool is mounted must have the same outer diameter and same support area (according to EN 13218, ANSI B7.1, AS 1788.1).

	Power drills	 Robot applications

PFERD wire qualities

In order to fulfil the particular requirements for working with stainless steel (INOX), PFERD uses wire quality 1.4310 (V2A) for all INOX brushes. Practical experience from industry has shown that this offers excellent corrosion resistance with an optimum tool life.

All PFERD brushes with INOX filaments are colour-coded in blue and are suitable for use on all stainless steels (INOX), such as V4A.

INOX and magnetism

The wire quality 1.4310 tends to become ferromagnetic in the case of cold working; i.e. it can be attracted using magnets. The reason for this is a change in the microstructure caused by deformation (e.g. during the wire drawing process). This does not have any impact on the quality and corrosion resistance of the INOX filament. The filament is still resistant to corrosion.

AISI	Code acc. to EN 10027-1	Material no. acc. to EN 10027-2
304	X5CrNi18-10	1.4301 (V2A)
301	X10CrNi18-8	1.4310 (V2A)
316	X5CrNiMo17-12-2	1.4401 (V4A)
316	X3CrNiMo17-13-3	1.4436 (V4A)
316Ti	X6CrNiMoTi17-12-2	1.4571 (V4A)

Safety Notes:

= Wear eye protection!

= Wear hearing protection!

= Wear a dust mask!

= Wear gloves!

Maximum permitted rotational speed

In order to guarantee operating safety, the maximum permitted rotational speed indicated on the brush, label and in this catalogue must never be exceeded!

Please refer to our product information and product tables for further recommendations regarding optimum operating speeds. These give details of the recommended rotational speeds [RPM] for an optimum working result.

= Read the safety notes!

Brush diameter

In the case of hand-held tool drives, the brush diameter should never exceed 180 mm, regardless of the filament material.

PFERDVIDEO

You will receive more information here or at www.pferd.com.au

= Use a protective machine cover!

Recommendations for use:

Contact pressure and working position

Incorrect (1)

Correct (2)

Only use the wire tips (Fig. 2).

Exception

In the case of brushes with plastic filament material, it is not only the wire tips that can be used, but 2–3 mm of the filaments. In the case of stationary brushes, machining should be carried out under the middle of the brush (see Fig. 2).

Visible trim lengths

Short visible trim lengths give a stiffer trim surface, resulting in more aggressive brushing action. Longer trim lengths are more flexible, giving a softer brush performance that produces a more uniform finish, even on irregular surfaces.

Self-sharpening effect

The self-sharpening effect can be improved during use by changing the brush operating direction.

Filament diameters

Thick filament

- An aggressive brushing effect with a coarse surface finish, as fewer wire tips are in contact with the surface of the workpiece at the same time.

Thin filament

- A soft brushing effect with a fine surface finish, as many wire tips are in contact with the surface of the workpiece at the same time.
- A longer tool life for the brush due to the higher level of flexibility of the filaments.

Recommendations for avoiding corrosion

Cause of corrosion	Solution
Change in the microstructure due to too much heat build-up.	Avoid heat build-up through: ■ Lower rotational speed ■ Reduced contact pressure ■ Oscillating brushing
Contact between the workpiece and the parts of the brush that are made of steel.	■ Use INOX-TOTAL type brushes. ■ Avoid contact between the face plates and workpiece. ■ Use end brushes with plastic protection.
Mixture of work on steel and stainless steel (INOX).	■ Do not use brushes that have already been used to work on steel, copper or other metals. ■ Do not work on steel in the vicinity of stainless steel (INOX) applications.
Wire particles are introduced into the surface (crevice corrosion).	■ Avoid a high contact pressure. ■ Use a low rotational speed.
Stock removal rate is too low.	Removal of deep structural changes by: ■ Extending the brushing time ■ Using grinding tools

The PFERD range includes tool drives for grinding, milling, brushing, cutting and polishing in manual applications as well as in robotic and semi-stationary applications. PFERD is one of only a few manufacturers that can offer a wide range of tools for work on surfaces and cutting of materials, as well as drives designed specifically for these tools, all from a single source.

The wide product range includes air-powered drives, electric drives and flexible shaft drives and thus offers the best solution for almost any working environment.

PFERD tool drives are characterized by their performance and durability. They are less prone to faults and comply with the latest technological standards.

Economic value

Time is money. The cost-effectiveness of a process is determined by the performance of the tool and the time required. The faster

the grinding process, the greater its cost-effectiveness. The best results are achieved by tools that have a consistently high aggressiveness throughout the processing time, in combination with PFERD quality tool drives. These are powerful, durable and less susceptible to faults.

$$t = \text{€}$$

Rotational speed n

The rotational speed n is given in revolutions per minute [RPM]. The required rotational speed is determined from the cutting speed V in metres per minute [m/min] or in metres per second [m/s] and the diameter of the tool $d \times \pi$ (3.14).

Note:
The rotational speed data for the tools relates to their use under load.

$$n = \frac{V}{d \times \pi}$$

Cutting speed V

The cutting speed is the speed at which a tool bit moves through the material to be worked in the direction of the cut and removes a chip.

The cutting speed V is given in metres per minute [m/min] or metres per second [m/s]. It depends on the rotational speed of the drive n in revolutions per minute [RPM] and the diameter of the tool $d \times \pi$ (3.14).

$$V = n \times d \times \pi$$

PFERD VALUE – Your added value with PFERD

Results from the PFERD test laboratories as well as from the product tests by independent testing institutes prove: PFERD tools offer measurable added value.

Discover PFERDERGONOMICS and PFERDEFFICIENCY:

As part of PFERDERGONOMICS, PFERD offers ergonomically optimized tools and tool drives that contribute to greater safety and working comfort, and thus to health protection.

As part of PFERDEFFICIENCY, PFERD offers innovative, high-performance tool solutions and tool drives with outstanding added value.

Safety regulations

Advice and products made to order

PFERD offers you individual targeted support to solve your application problems. PFERD's experienced sales representatives and technical advisors are happy to help you select your tool drive – also by visiting you on-site. Please contact us for further details.

If you cannot find the solution for your particular application in our extensive catalogue range, we can develop and produce tool drives in premium PFERD quality on request, tailor-made to meet the requirements of your job.

Guarantee

Our PFERD guarantee for defects on air and electric grinders and on flexible shaft drives as well as on the accessories is exercised in such a manner that all parts which have material defects will either be repaired or replaced free of charge at our discretion. We shall honour these material defect claims for a maximum of 12 months. This provision shall be invalid if longer periods are prescribed by law.

The warranty shall not cover damage caused by improper handling, the use of spare parts other than our own, or by repairs carried out in workshops other than our own that are unauthorized.

Technical modifications

Technical developments and ergonomic improvements are continuously incorporated into our design and manufacture. We therefore reserve the right to make technical changes to our products.

In the event of changes to the design, we still ensure the availability of spare parts for four years.

The PFERD product range includes three drive types:

Air grinders		Electric grinders		Flexible shaft drives	
					
Applications and economic value					
Single workplace, stationary		Single workplace, flexible use for mobile use		Single workplace, stationary with a variety of tool applications, very easy to handle at high power output	
High power output, low wear, long service life, economical air consumption, robust, hard-wearing slide vane and turbine motors		High power output, low wear, long service life		Very robust, low wear, long service life	
Drive type					
-		Micro motors		-	
Straight grinders		Straight grinders		Straight grinders	
Angle grinders		Angle grinders		Angle grinders	
-		Drum grinders		Drum grinders	
Belt grinders		Belt grinders		Belt grinders	
Special drives		Special drives		Special drives	
-		Fillet weld grinders		-	
Drive characteristics					
No risk of overloading, can be loaded up to machine standstill		Overload protection, can briefly withstand up to four times the rated output		Overload protection, can briefly withstand up to six times the rated output	
Optimum rotational speed and power ratios		Optimal tuning possible for tool application		Optimal tuning possible for tool application	
Good size to power output ratio		Higher power output compared to air grinders at the same rotational speed		High motor power output, compact hand-pieces, high power transmission to the tool	
Achieve high rotational speeds		Achieve constant speed, ideal for tools that need a constant rotational speed		Cover large rotational speed ranges	
Ergonomics/Handling					
Drive size and shape suitable for many applications		Ergonomic drive shapes, easy to handle		Light arbors that are easy to handle for low-fatigue work	
Rotational speed range [RPM]					
4,000 to 101,000		100 to 80,000		100 to 40,000	
Rotational speed control					
Single-rotation speed		Stepless, electronic		Stepless, electronic, alternatively using gears	
Energy					
Compressed air (6.3 bar)		1-phase alternating current Safety extra-low voltage		1-phase alternating current, 3-phase alternating current Safety extra-low voltage	
Power range [W]					
75 to 2,600		260 to 1,750		500 to 6,100	
Safety					
Safe energy form, no sparking		Safeguard to prevent unintentional re-starting		42-volt type suitable for safe use in narrow, conductive spaces	
Maintenance					
Simple replacement of worn parts		Simple replacement of carbon brushes		Maintenance by technically experienced employees is possible

Coated Materials Converted In Australia

PFERD Australia manufacture belts, discs, sheets and rolls which are made to order in our 'Coated Production Facility' located in Dingley, Victoria. A comprehensive range of coated material is available in both paper and cloth, designed to suit all types of applications. Available materials include aluminium oxide, zirconia, silicon carbide and ceramic in a variety of grit sizes.

If the product you need is not shown in our product guide, please contact our customer service on **1300 073 373**.

Metal

- Portable Belts
- File Sander Belts
- Stroke Sanding
- Coil Grinding
- Backstand Grinding
- Dome Grinding
- Flat Bar Grinding
- Pipe & Tube Grinding
- Roll Grinding
- Sheet Grinding
- Turbine Grinding
- Centreless Polishing

Safety Recommendations For The Use Of Abrasives

The recommendations shown should be followed by all users of abrasive products in the interest of their personal safety.

GENERAL PRINCIPLES OF SAFETY

Abrasive products improperly used can be very dangerous.

- Always follow the instructions provided by the abrasive product and machine supplier.
- Ensure that the abrasive product is suitable for its intended use. Examine all abrasive products for damage or defects before mounting.
- Follow the correct procedures for handling and storage of abrasive products.

Be aware of the hazards likely during the use of abrasive products and observe the recommended precautions to be taken:

- Bodily contact with the abrasive product at operating speed.
- Injury resulting from product breakage during use.
- Grinding debris, sparks, fumes and dust generated by the grinding process.
- Noise.
- Vibration.

Use only abrasive products conforming to the highest standards of safety. These products will bear the Australian standard AS: 1788 number and/or the inscription "oSa".

Employers should carry out a risk assessment on all individual abrasive processes to determine the appropriate protective measures necessary. They should ensure that their employees are suitably trained to carry out their duties.

This information is only intended to provide basic safety recommendations. More detailed information on the safe use of abrasive products, comprehensive Safety Codes are available from FEPA or your National Trade Association:

- FEPA Safety Code for Bonded Abrasives and Precision Superabrasives.
- FEPA Safety Code for Superabrasives for Stone and Construction.
- FEPA Safety Code for Coated Abrasives.

PRECAUTIONS AGAINST LIKELY HAZARDS

Bodily contact with the abrasive product

- Always take great care and attention when using abrasive products. Tie back long hair and do not wear loose clothing, ties and jewellery.
- Prevent accidental start-up of the machine before mounting or changing an abrasive product. Isolate machines from their power source where necessary.
- Never remove guards from machines where fitted and ensure they are in good condition and properly adjusted before starting the machine.
- Always use gloves and suitable clothing where the workpiece or machine is hand-held. For gloves, a minimum protection level of EN 388 Category 2 is recommended.
- After switching off the machine, ensure the product has come to rest before leaving the machine unattended. Injury caused by product breakage
- Always handle abrasives with great care, they are easily damaged. Examine all products for defects or damage before use.
- Store abrasives in dry, frost-free conditions avoiding wide variations in temperature. Ensure they are properly protected and supported to prevent damage and distortion.
- Coated abrasives should be stored at 18-22° C, 45-65% relative humidity.
- Abrasive belts should be hung on a rod or peg not less than 50mm diameter.
- Never use an abrasive product beyond its expiry date where marked. Observe the shelf life for the following specific products; Resinoid and Shellac products 3 years, Rubber products 5 years, Vitrified products 10 years.

Check abrasive product or package for any warnings or other safety information:

= Not permitted for hand-held grinding!

= Not permitted for face grinding!

= Not permitted for wet grinding!

= Do not use if damaged!

= Follow the safety instructions!

= Wear eye protection!

= Wear hearing protection!

= Wear gloves!

= Wear a dust mask!

= Observe the minimum contact angle!

Only permitted with a back-up pad

– Only permitted for wet cutting

– Only permitted for use on totally enclosed machines

Injury caused by product breakage

- Ensure that the correct abrasive product is selected. Never use a product if it cannot be properly identified.
- Follow the instructions provided by the abrasive product or machine supplier when mounting abrasive products. Observe any mounting indications marked on the product such as direction of run or mounting position.
- Never force the abrasive product onto the mounting fixture or modify it to fit.
- Never exceed the maximum operating speed where specified.
- Check that the correct mounting devices are used and that they are undistorted, clean and free from burrs.
- Use mounting blotters where supplied.
- Do not tighten the mounting device excessively.
- After mounting or re-mounting an abrasive product, conduct a trial run at operating speed with the guard in place for at least 30 seconds, standing clear of the machine before use.
- Never remove guards from machines where fitted and ensure they are in good condition and properly adjusted.
- Ensure that the workpiece is secure and properly supported. Ensure that work rests are properly adjusted and secure.
- Never start the machine with the workpiece in contact with the abrasive product.
- Never apply excessive force or shock to the abrasive product or let it overheat.
- Do not grind on the part of the product that is not designed for the operation. Avoid grinding with the edge of abrasive belts, use the centre of the belt if possible.
- Avoid clogging and uneven wear to ensure that the abrasive product is working efficiently. Dress frequently where appropriate.
- Let the abrasive product stop naturally, not by applying pressure to its surface.
- Turn off and spin out excess coolant before stopping the machine.
- Do not leave abrasive belts under tension when not in use.

Grinding debris – sparks, dust and fumes

- Exposure to dust generated from workpiece and/or abrasive materials can result in lung damage and/or other physical injury
- All dry grinding processes should be provided with adequate extraction facilities.
- Do not use abrasive products near flammable materials.
- The use of respirators complying with EN149 is recommended for dry grinding processes even if extraction systems are provided.
- Guards where provided should be adjusted to deflect sparks and debris away from the operator.
- Take additional measures to protect people working nearby.
- Eye protection is recommended for all machine applications for abrasives. For hand-held machines or workpiece, goggles or full-face shields are recommended.
- Eye protection with a minimum protection of EN166 Grade B is recommended.
- Ensure that the correct abrasive product is selected. An unsuitable product can produce excessive debris and dust.

Noise

- Ear protection complying with EN352 is recommended for all applications where the workpiece or machine is hand-held, irrespective of the noise level.
- Ensure that the correct abrasive product is selected. An unsuitable product can produce excessive noise and vibration
- Processes where the workpiece or machine is hand-held can cause vibration injury.
- Action needs to be taken if tingling, pins and needles or numbness is experienced after 10minutes continuous use of the abrasive product.
- The effects of vibration are more pronounced in cold conditions so keep the hands warm and exercise hands and fingers regularly. Use modern equipment with low vibration levels.
- Maintain all equipment in good condition and stop the machine and have it checked if excessive vibration occurs.
- Use good quality abrasive products and keep them in good condition during their life.
- Maintain mounting flanges and back-up pads in good condition and replace if worn or distorted.
- Do not grip the workpiece or machine too tightly and do not exert excessive pressure on the abrasive product.
- Avoid continuous use of the abrasive product.
- Use the correct product. An unsuitable product can produce excessive vibration.
- Don't ignore the physical symptoms of vibration - seek medical advice.

Disposal of abrasives

- Used or defective abrasives should be disposed in accordance with local or national regulations.
- Further information can be obtained from material safety data sheets provided by the supplier.
- Be aware that the abrasive product may be contaminated with material from the workpiece or process after use.
- Disposed abrasive products should be damaged to prevent them from being taken from waste skips and reused.

Important Notice:

Every effort has been made to ensure that all information supplied in this "Safety Recommendations For The Use Of Abrasives" section is accurate and up to date. PFERD Australia Pty. Ltd. cannot accept responsibility for any error or omission, nor for any consequential loss or damage that may arise.

Notes

Our Most Important Tool is Made of Paper

Across all industries, our PFERD Tool Manual 23 is recognised as the key reference for cutting, grinding, milling, filing, brushing and polishing. Your "quick product selection guide" navigation aid has been added to facilitate your search for the right tool. The first pages of our Tool Manual 23, in combination with the tabs, will first take you to the appropriate catalogue section.

At the start of each catalogue section, revised introductory pages will guide you to the optimal tool for your needs. The keyword index has been expanded to include many common terms and synonyms for available PFERD tools.

PFERD Online - www.pferd.com.au

Visit PFERD Australia online at www.pferd.com.au

The web site includes videos, general product data, specifications, new products and much more. Keep up-to-date with the latest abrasive products and news or connect with PFERD on social media.
